# ISOON LAOHASOOT

Working as Software Developer with 3 years of professional working experience and 1 year for part time. I am passionate with programming because it's exciting and challenging for myself. Currently, I am interested to improve my programming skill with Node.js and Graphql.

## EDUCATION

King Mongkut's Institute of Technology Ladkrabang.
Graduated in 2015

- Bachelor of Information Technology

## EXPERIENCE

**2014**
*Part time Software Developer at Five Loop*

I was working as a part time developer for fiveloop company with a php, codeigniter, sql. FIVELOOP is a start up to help programmer find a job and help company to find a good programmer and At that time I helped FIVELOOP to create a joblist website for programmer.

**2015 - 2017**
*Junior Software Developer at Fiveloop*

I decided to work at fiveloop becuase I think I like a startup culture and I can decide every thing about technology for create a software in this company, At that time I started the project called "Cerebro", its idea was scraping all programmer data from job list web or social media like a linkedin, github and then I collected it in our database for searching about jobs, and candidates, this software help the company to send a potential candidates to other company.

**2017-2019**
*Senior Software Developer at Fiveloop*

I use Node.js, React, MariaDB to make a software for my company called "Wisible", that is a sales automation software for team sales or anyone who need to track sales process and manage sales work flow like a salesforce but easy to use and easy to customize and this is the most proundly project becuase I choose tech stack called Appollo (Graphql) , at that time I was lernining about this stack from zero. I expect it Helps my work to easier than older project.

**2019-2020**
*Senior Software Developer at ATvantage*

I use Node.js, React lambda, dynamodb to build a platform called "FULLOOP".
Actually, they have a old platform but It too old. They need me to build a new one
follow the old project. The feature is as same as the old one but tech stack is new
technology (React, Node, dynamo). This project is a platform for suvey and report. For
this job I have lerned a lot about AWS Stack (EC2, Memcached, Lambda, DynamoDB,
CloudFront, CloudFormation, CloudWatch ) and lerned about ElasticSearch Kibana.

# SKILLS

**Languages:** Native Fluency in both spoken and written in Thai, Fair command of
English

**Confident in** JavaScript, Node.js, Apollo(grahpql), React, SQL, Mongo

**Skill**: Html CSS Node.JS SQL Mongo Java Python PHP (codeigniter) React
AngularJS Nginx Docker Apollo Github
